**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of 35 U.S.C. 102(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1, 4, 12, 15 are rejected under 35 U.S.C. 102(a) as being unpatentable Treusch (US 6768753).

With respect to claims 1, 12 Treusch '753 discloses a solid state semiconductor laser comprising a plurality of semiconductor laser diodes connected in series to one another (Fig 1: D1-D4 connected in series) having a plurality of bypass diodes each connected in parallel to each semiconductor laser diode (Fig 1: DS1-DS4 "bypass" safety diodes) having a higher rising voltage than a rising voltage of said parallel-connected semiconductor laser diodes (Col 1: 40-65; Col 2: 10-65 - allowing the bypass safety diode to take over the function of the failed laser diode), that parallel connection being made in such a way that a polarity of one end of each of said semiconductors laser diode is the same as a polarity of that end of the associated bypass diode which is connected to said one end of that semiconductor laser diode and a polarity of the other end of said semiconductor laser diode is the same as a polarity of that end of the associated bypass diode which is connected to said other end of that semiconductor laser diode (Fig 1: D1 & DS1/ D2 & DS2... where the ends polarity of the laser diode and bypass diode are connected togetherd.)

With respect to claims 4, 15 Treusch '753 further discloses the heat sink use for cooling the bypass diode connecting comprising a first cooling member which is connected to said bypass diodes (Col 2: 39-40).

***Allowable Subject Matter***

3. Claims 2-3, 5-11, 13-14, 16-20 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The references of the record fail to teach or suggest:

**Claim 2:**

A semiconductor laser device comprising a plurality of semiconductor laser diodes connected in series and a plurality of bypass diodes each connected in parallel to each semiconductor laser diode having a higher rising voltage in the series diode than the parallel-connected semiconductor laser diodes, and the polarity of each semiconductors laser diode is the same as a polarity of the associated bypass diode, wherein heat sinks respectively fixed to said semiconductor laser diodes and each having a refrigerant inside.

**Claim 5:**

Wherein a cold plate comprises of refrigerant connected to the bypass diodes.
